RESEARCH STUDY

Individualized brain Stimulation To Improve Mobility (The I-StiM Study)

***Have you fallen in the past year?
Do you fear you will fall again?***

Study goal: To determine whether non-invasive brain stimulation improves balance, walking, and memory in adults who have fallen in the past year.

Requirements: If you are over age 65 and have fallen in the past year, you may be eligible to participate.

Participation includes:

- Up to 27 visits over 8 months
- Health interviews, memory, walking and balance testing assessments
- 2 MRI scans at Beth Israel in Boston
- 20 minute sessions of noninvasive brain stimulation (1 session per day over 20 days, Mon-Fri, over 4 weeks)

Participation is paid up to \$510.

Free parking and/or transportation provided
